Re: Pratt & Whitney Part B Application CTD 990672081  
Letter of September 6, 1984

Dear Mr. Hitchcock:

Pratt & Whitney hereby requests extension until March 1, 1985 for submitting a response to the Notice of Deficiencies contained in the subject letter which we received on September 17, 1984. This request is made as a consequence of the following:

Item II B.1-6. Modifications to the hazardous waste incinerator are necessary before it can achieve compliance with all applicable regulations. To this end Pratt & Whitney has had Recon Systems, Inc. submit a proposal to thoroughly investigate the design and operational problems which presently exist, and to propose the necessary modifications which will allow compliance. Only after this work is finished can a complete and accurate response be prepared for the Notice of Deficiency which will incorporate the new information. To complete this work will take much longer than the remaining time allotted for our response.

We will submit the revised permit application addressing the remaining items contained in the Notice of Deficiency in unexecuted draft form on or before November 1, 1984.

If you have any questions or need further information, please contact Kevin P. Vidmar at 565-2016.

Thank you for your courtesy and cooperation.

Very truly yours,

*Robert J. Wise*  
Robert J. Wise
